

QA Testing Documentation

Project Information

Project Name: Tichi Web Application

Testing Type: Manual Testing

Prepared By: Bharath Ganesh K

Date: July 2026

1. Objective

The objective of this testing activity is to verify the functionality, usability, and validation behavior of the Login and Signup modules of the Tichi web application. The testing ensures that users can successfully create accounts, authenticate themselves, and receive appropriate validation messages when invalid inputs are entered.

2. Scope of Testing

The following modules were included in testing:

Login Module

- Login page accessibility
- Valid login functionality
- Invalid email validation
- Unregistered email validation
- Incorrect password handling
- Empty field validation
- Password masking
- Password visibility toggle
- Multiple login click handling

Signup Module

- Signup page accessibility
- Account creation
- Email format validation
- Duplicate account prevention
- Required field validation

- Password confirmation validation
 - Password policy validation
 - Boundary value testing
 - Special character validation
 - Terms and conditions validation
-

3. Test Environment

Parameter	Details
Application	Tichi Web Application
Testing Type	Manual Testing
Environment	Stage Environment
Platform	Web Application
Browser	Browser-based Testing
Operating System	Windows

4. Test Execution Summary

Login Module

Total Test Cases	Priority
12	High, Medium, Low

Key Scenarios Tested

- Login with valid credentials
 - Login with invalid email format
 - Login with unregistered email
 - Login with incorrect password
 - Empty email validation
 - Empty password validation
 - Password masking
 - Password visibility toggle
-

Signup Module

Total Test Cases	Priority
10	High, Medium, Low

Key Scenarios Tested

- Signup with valid data
 - Invalid email validation
 - Duplicate account prevention
 - Empty mandatory fields
 - Password mismatch validation
 - Password policy validation
 - Boundary value validation
 - Terms acceptance validation
-

5. Defect Summary

Defect ID: DEF-001

Title

Login Allows Invalid Email Format

Module

Login

Severity

High

Priority

High

Status

New

Environment

Tichi Stage Web Application

Preconditions

User is on the Login Page.

Steps to Reproduce

1. Open the Login page.
2. Enter an invalid email format such as `test@`.
3. Enter any password.
4. Click the Login button.

Expected Result

The system should validate the email format and prevent login submission.

Actual Result

The application allows the user to log in using an invalid email format.

Impact

- Basic validation is bypassed.
- Poor data quality may be introduced.
- Authentication process becomes unreliable.
- Potential security concerns may arise.

Reproducibility

Always

Suggested Fix

Implement both client-side and server-side email format validation before processing authentication requests.

6. Testing Conclusion

The Login and Signup modules were tested using manual testing techniques. Most core functionalities behaved as expected. However, one critical defect was identified in the Login module where invalid email formats are accepted during authentication.

The defect has been documented and reported with High Severity and High Priority due to its impact on validation and authentication reliability.

Further regression testing is recommended after the defect is fixed to ensure no additional issues are introduced.
